

Focus Sulfonate M

Product Description

Focus Sulfonate M is a natural, oil-soluble, medium molecular weight, petroleum-derived sodium sulfonate. **Focus Sulfonate M** will function as a primary emulsifier for formulating soluble oil and semi-synthetic fluids. It also provides inherent corrosion and rust inhibition properties, as well as outstanding dispersion and wetting properties.

Performance Features

- Provides emulsification properties in soluble oils and semi-synthetic metalworking fluids.
- Excellent corrosion and rust inhibition properties.
- Outstanding dispersion and wetting properties of both solids and liquid solid systems.

Typical Properties

Feature	Data
Appearance	Dark amber liquid
Specific gravity @ 25C	1.0
% water	5.0
1% pH in DI water	8.0
Viscosity @ 100C	100
Molecular wt. (average)	465
% sulfonate	60

Packaging

Packaging	Description	Net Wt.
Drums	55 gallon non-returnable	440 lbs
Totes	275 gallon non-returnable	2,200 lbs

Registration

USA	TSCA
Canada	DSL
